The Second Term Exam of English

Text:

Nowadays, air is getting more and more polluted because of the industrialization and noxious gases released from cars. You can hardly breathe clean or fresh air in cities. People are getting dirtier and dirtier. They throw rubbish wherever they can. They don't even use tins or bags. We can also talk about the boats which transport oil and sink in seas and oceans. They cause great damages in the submarine world.

Everything polluting the air causes acid rains which damage the forests. If these disappear, great changes in the climate will be caused because the trees are chemically very active as they provide us with oxygen. So let us safeguard the nature or it will be an environmental suicide for humanity and especially for the ozone layer which is so important for the world. If this layer is destroyed, people will be threatened to be affected by any kind of skin diseases.
